

Introducing New Imaging Technology Services at Baptist Beaches

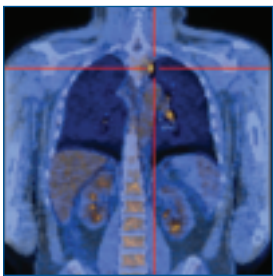

Baptist Medical Center Beaches (Baptist Beaches) has enhanced its Imaging Services, offering unparalleled convenience and comfort for patients. The department also provided physicians with new technology that will yield exquisite images for even the most complex cases.

New CT scanner technology

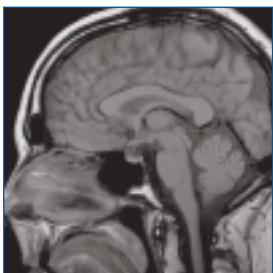

The new LightSpeedPro 16-slice CT scanner offers fast, accurate scan times, which means faster patient exams. The CT scanner also allows clinicians to perform a full array of applications for the head, abdomen, spine and chest.

New PET/CT and CT technology

A new PET/CT and CT scanner helps physicians diagnose and localize cancer faster than ever before, potentially reducing the number of invasive procedures such as biopsies. Another advantage is quick results reporting.

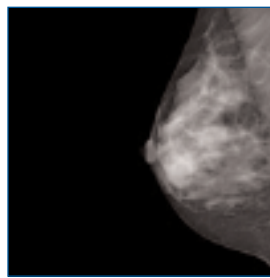

New MRI technology

The new Signa 1.5 Excite MRI provides high-definition (HD) images for a wide range of imaging procedures and is ideal for claustrophobic patients because of its shorter gantry. An additional

option for patients who cannot tolerate closed spaces is the mobile Open MRI, is still available.

New digital mammography

New digital mammography with computer-aided detection provides physicians with better visibility while allowing for quicker exams and electronic viewing of images. This technology is of particular benefit to younger patients with dense breast tissue.

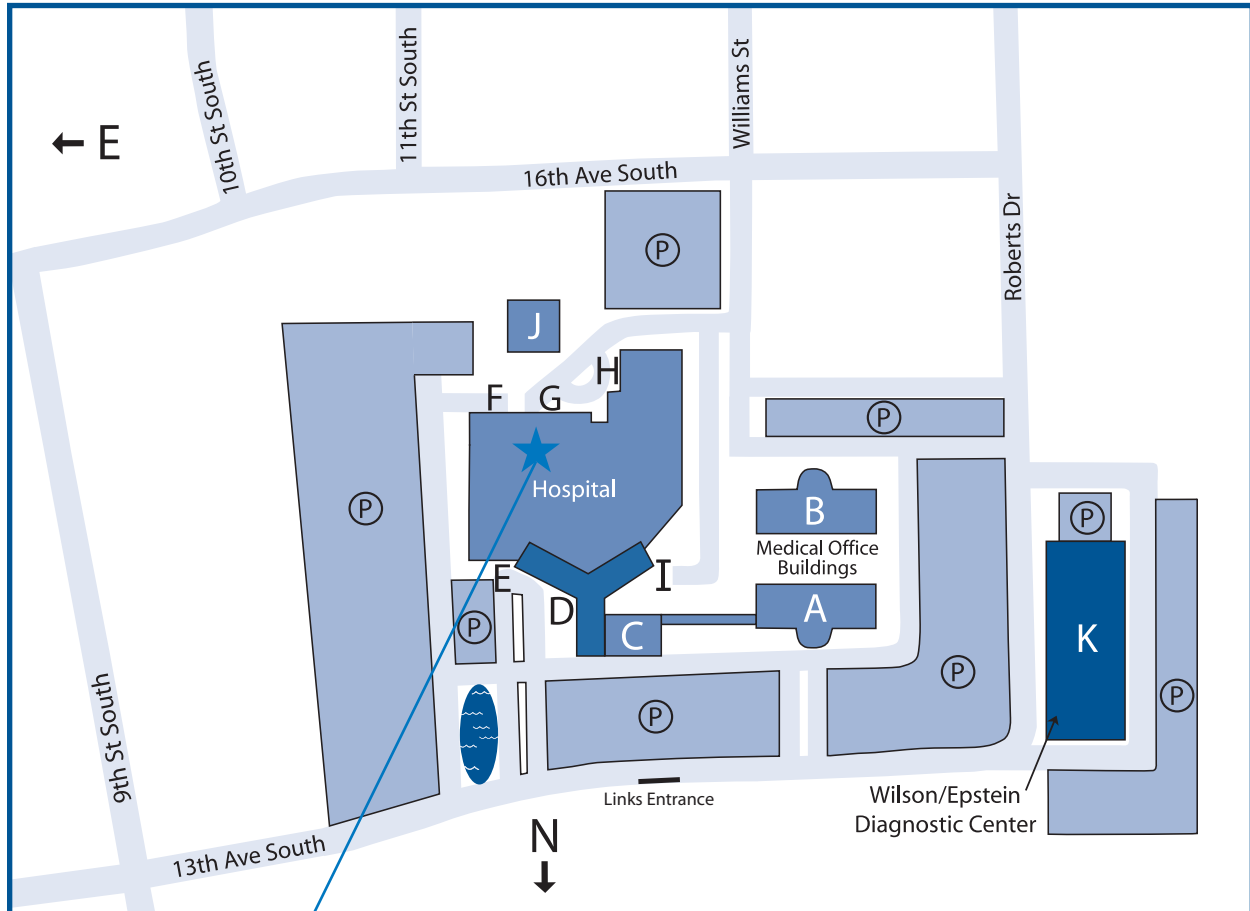

Additional improvements include:

- A digital radiographic suite
Digital radiography decreases the overall procedure time and increases image quality.
- Digital fluoroscopy
- A new, spacious, comfortable and efficient registration area in the hospital outpatient wing
- New CT and ultrasound suites
